I. INTRODUCTION

A. RISK FACTORS

Standard Risk Factors:

- Mutual Funds and securities investments are subject to market risks and there is no assurance or guarantee that the objectives of the Scheme will be achieved.
- Investment in Mutual Fund Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal.
- As the price / value / interest rates of the securities in which the scheme invests fluctuates, the value of your investment in the scheme may go up or down depending on the factors and forces affecting the capital markets.
- Past performance of the Sponsor and other affiliates/AMC/Mutual Fund (or any of its schemes) does not guarantee future performance of the scheme.
- **IDFC Fixed Maturity Plan - Quarterly Series 60** is the name of the scheme does not in any manner indicate either the quality of the scheme or its future prospects and returns.
- The sponsor is not responsible or liable for any loss resulting from the operation of the scheme beyond the initial contribution of Rs.30,000 made by it towards setting up the Fund.
- The present scheme is not a guaranteed or assured return *scheme*

Scheme Specific Risk Factors

- **Price-Risk or Interest-Rate Risk:** Fixed income securities such as bonds, debentures and money market instruments run price-risk or interest-rate risk. Generally, when interest rates rise, prices of existing fixed income securities fall and when interest rates drop, such prices increase. The extent of fall or rise in the prices is a function of the existing coupon, days to maturity and the increase or decrease in the level of interest rates.
- **Credit Risk:** In simple terms this risk means that the issuer of a debenture/bond or a money market instrument may default on interest payment or even in paying back the principal amount on maturity. Even where no default occurs, the price of a security may go down because the credit rating of an issuer goes down. It must, however, be noted that where the Scheme has invested in Government Securities, there is no credit risk to that extent. Different types of securities in which the scheme would invest as given in the scheme information document carry different levels and types of risk. Accordingly the scheme's risk may increase or decrease depending upon its investment pattern. E.g. corporate bonds carry a higher amount of risk than Government securities. Further even among corporate bonds, bonds which are AAA rated are comparatively less risky than bonds which are AA rated.
- **Re-investment Risk:** Investments in fixed income securities may carry re-investment risk as interest rates prevailing on the interest or maturity due dates may differ from the original coupon of the bond. Consequently, the proceeds may get invested at a lower rate.
- **Repurchase Risk:** The Scheme is a close ended income Scheme. No redemption/repurchase of units shall be allowed prior to the maturity of the scheme. Investors wishing to exit may do so through stock exchange mode. Listing of the units of the fund does not necessarily guarantee their liquidity and there can be no assurance that an active secondary market for the units will develop or be maintained. Consequently, the Fund may quote below its face value / NAV.

Risk Associated with Securitised Debt

The Scheme may invest in domestic securitized debt such as asset backed securities (ABS) or mortgage backed securities (MBS). Asset Backed Securities (ABS) are securitized debts where the underlying assets are receivables arising from various loans including automobile loans, personal loans, loans against consumer durables, etc. Mortgage backed securities (MBS) are securitized debts where the underlying assets are receivables arising from loans backed by mortgage of residential / commercial properties. ABS/MBS instruments reflect the undivided interest in the underlying pool of assets and do not represent the obligation of the issuer of ABS/MBS or the originator of the underlying receivables. The ABS/MBS holders have a limited recourse to the extent of credit enhancement provided. If the delinquencies and credit losses in the underlying pool exceed the credit enhancement provided, ABS/MBS holders will suffer credit losses. ABS/MBS are also normally exposed to a higher level of reinvestment risk as compared to the normal corporate or sovereign debt.

At present in Indian market, following types of loans are securitised:

- Auto Loans (cars / commercial vehicles /two wheelers)
- Residential Mortgages or Housing Loans
- Consumer Durable Loans
- Personal Loans
- Corporates Loans

The main risks pertaining to each of the asset classes above are described below:

Auto Loans (cars / commercial vehicles /two wheelers)

The underlying assets (cars etc) are susceptible to depreciation in value whereas the loans are given at high loan to value ratios. Thus, after a few months, the value of asset becomes lower than the loan outstanding. The borrowers, therefore, may sometimes tend to default on loans and allow the vehicle to be repossessed. These loans are also subject to model risk. ie if a particular automobile model does not become popular, loans given for financing that model have a much higher likelihood of turning bad. In such cases, loss on sale of repossession vehicles is higher than usual.

Commercial vehicle loans are susceptible to the cyclicity in the economy. In a downturn in economy, freight rates drop leading to higher defaults in commercial vehicle loans. Further, the second hand prices of these vehicles also decline in such economic environment.

Housing Loans

Housing loans in India have shown very low default rates historically. However, in recent years, loans have been given at high loan to value ratios and to a much younger borrower classes. The loans have not yet gone through the full economic cycle and have not yet seen a period of declining property prices. Thus the performance of these housing loans is yet to be tested and it need not conform to the historical experience of low default rates.

Consumer Durable Loans

The underlying security for such loans is easily transferable without the bank's knowledge and hence repossession is difficult. The underlying security for such loans is also susceptible to quick depreciation in value. This gives the borrowers a high incentive to default.

Personal Loans

These are unsecured loans. In case of a default, the bank has no security to fall back on. The lender has no control over how the borrower has used the borrowed money. Further, all the above categories of loans have the following common risks:

All the above loans are retail, relatively small value loans. There is a possibility that the borrower takes different loans using the same income proof and thus the income is not sufficient to meet the debt service obligations of all these loans.

In India, there is insufficiency of ready comprehensive and complete database regarding past credit record of borrowers. Thus, loans may be given to borrowers with poor credit record. In retail loans, the risks due to frauds are high.

Corporate Loans

These are loans given to single or multiple corporates. The receivables from a pool of loans to corporates are assigned to a trust that issues Pass through certificates in turn. The credit risk in such PTCs is on the underlying pool of loans to corporates. The credit risk of the underlying loans to the corporates would in turn depend of economic cycles.

B. REQUIREMENT OF MINIMUM INVESTORS IN THE SCHEME

The Scheme(s) and individual Plan(s) under the Scheme(s) shall have a minimum of 20 investors and no single investor shall account for more than 25% of the corpus of the Scheme(s)/Plan(s). These conditions will be complied with immediately after the close of the NFO itself i.e. at the time of allotment. In case of non-fulfillment with the condition of minimum 20 investors at the plan level the respective plan, shall be wound up in accordance with Regulation 39 (2) (c) of SEBI (MF) Regulations automatically without any reference from SEBI. In case of non-fulfillment with the condition of 25% holding by a single investor on the date of allotment, the application to the extent of exposure in excess of the stipulated 25% limit would be liable to be rejected and the allotment would be effective only to the extent of 25% of the corpus collected. Consequently, such exposure over 25% limits will lead to refund within 6 weeks of the date of closure of the New Fund Offer.

C. SPECIAL CONSIDERATIONS, if any

All the above factors not only affect the prices of securities but may also affect the time taken by the Fund for redemption of units, which could be significant in the event of receipt of a very large number of redemption requests or very large value of redemption requests. The liquidity of the assets may be affected by other factors such as general market conditions, political events, bank holidays and civil strife. In view of this, the Trustee has the right in its sole discretion to limit redemption (including suspension of redemption) under certain circumstances as described in the SAI.

The liquidity of the Scheme's investments may be restricted by trading volumes, settlement periods and transfer procedures. In the event of an inordinately large number of redemption requests or of a restructuring of the Scheme's portfolio, the time taken by the Scheme for redemption of Units may become significant. In view of this, the Trustee has the right in its sole discretion to limit redemption (including suspension of redemption) under certain circumstances as described in the SAI.

Redemptions due to change in the fundamental attributes of the Scheme or due to any other reasons may entail tax consequences. The Trustee, AMC, Mutual Fund, their directors or their employees shall not be liable for any such tax consequences that may arise.

The tax benefits described in this Scheme Information Document are as available under the present taxation laws and are available subject to conditions. The information given is included for general

purpose only and is based on advice received by the AMC regarding the law and practice in force in India and the Unitholders should be aware that the relevant fiscal rules or their interpretation may change. As is the case with any investment, there can be no guarantee that the tax position or the proposed tax position prevailing at the time of an investment in the Scheme will endure indefinitely. In view of the individual nature of tax consequences, each Unitholder is advised to consult his/ her own professional tax advisor.

NOTE ON DEBT MARKET & MONEY MARKET IN INDIA

The Indian debt markets are one of the largest such markets in Asia. Government and Public Sector enterprises are predominant borrowers in the market. While interest rates were regulated till a few years back, there has been a rapid deregulation and currently both the lending and deposit rates are market determined.

The debt markets are developing fast, with the rapid introduction of new instruments including derivatives. Foreign Institutional Investors are also allowed to invest in Indian debt markets now. There has been a considerable increase in the trading volumes in the market. The trading volumes are largely concentrated in the Government of India Securities, which contribute a significant proportion of the daily trades.

The money markets in India essentially consist of the call money market (i.e. market for overnight and term money between banks and institutions), repo transactions (temporary sale with an agreement to buy back the securities at a future date at a specified price), commercial papers (CPs, short term unsecured

promissory notes, generally issued by corporates), certificate of deposits (CDs, issued by banks) and Treasury Bills (issued by RBI). In a predominantly institutional market, the key money market players are banks, financial institutions, insurance companies, mutual funds, primary dealers and corporates.

Following table exhibits various debt instruments alongwith indicative yields as on August 31, 2010.

The various instruments currently available for investments are:

Instruments	Yield Range (% per annum)

Typically, investments in securitised debt instruments offer better yield to the investors. The various types of receivables that can be securitised can be receivables from auto loans, personal loans, loans to corporates etc. The investment would be made in line with the objective of the fund.

E.INVESTMENT STRATEGIES AND RISK CONTROL

Investment Strategy

The domestic debt markets are maturing rapidly with liquidity emerging in various debt segments through the introduction of new instruments and investors. The aim of the Investment Manager will be to allocate the assets of the Scheme between various money market and fixed income securities with the objective of achieving optimal returns with a highly liquid portfolio. The actual percentage of investment in various fixed income securities will be decided after considering the prevailing political conditions, the economic environment (including interest rates and inflation), the performance of the corporate sector and general liquidity and other considerations in the economy and markets.

The Fund has put in place detailed Investment manual defining the prudential and concentration limits for the portfolio limits. The investment management team is allowed full discretion to make sale and purchase decisions within the limits established. All investment decisions are recorded by the fund manager.

Investment Management Committee (IMC) in its periodic meetings will track portfolio investment rationale, portfolio composition, performance etc. Any modifications to the Investment manual is made by the IMC and is duly informed to the board. The performance of the fund will be monitored against its peer group in the industry and presented and reviewed at every Board meeting.

Currently no AMFI - recognised benchmark is available for strict comparison for the Scheme. However CRISIL Composite Bond Fund Index being a widely used benchmark in the market, the same has been selected as a standard benchmark for the purpose of this Scheme.

The fund reserves the right to change the said benchmark and/or adopt one/more other benchmarks to compare the performance of the Scheme.

The AMC may approach rating agencies such as CRISIL, ICRA, etc for ratings of the scheme.

Risk Control

Since investing requires disciplined risk management, the AMC would incorporate adequate safeguards for controlling risks in the portfolio construction process. The risk control process involves reducing risks through portfolio diversification, taking care however not to dilute returns in the process. The AMC believes that this diversification would help achieve the desired level of consistency in returns. The AMC may also implement certain internal control procedures / risk & exposure limits etc., which may be varied from time to time

The AMC aims to identify securities, which offer superior levels of yield at lower levels of risks. With the aim of controlling risks, rigorous in-depth credit evaluation of the securities proposed to be invested in will be carried out by the investment team of the AMC.

The Scheme may invest in other Schemes managed by the AMC or in the Schemes of any other Mutual Funds, provided it is in conformity with the investment objectives of the Scheme and in terms of the prevailing SEBI Regulations. As per the SEBI Regulations, no investment management fees will be charged for such investments and the aggregate inter Scheme investment made by all Schemes of IDFC Mutual Fund or in the Schemes under the management of other asset management companies shall not exceed 5% of the net asset value of the IDFC Mutual Fund.

For the present, the Scheme does not intend to enter into underwriting obligations. However, if the Scheme does enter into an underwriting agreement, it would do so after complying with the RBI Regulations and with the prior approval of the Board of the AMC/Trustee.

Investment in Securities Debt

The scheme shall invest in securitized debt to the extent mentioned in the asset allocation pattern of the scheme.

The following are the disclosures made pertaining to investments in securitized debt:

1. How the risk profile of securitized debt fits into the risk appetite of the scheme:

Securitized debt shall be considered like any other fixed income instrument and allocation are made based on the overall fixed income investment process which is applied consistently on all fixed income instruments. The proposed allocation to securitized debt in this scheme is made with an intention to deploy part of the allocation made for debt instruments with the objective to generate reasonable returns with medium risk; investment in securitized debt proposed in this scheme is in line with the overall risk profile of allocation in debt instruments. An investment in securitized debt is considered keeping in mind the asset allocation pattern of the scheme. While deciding the appropriateness of investing in Securitized debt, the following additional criteria are considered from a risk perspective:

- a. Underlying asset and credit rating of the issuer
- b. Amount\extent of excess collateral to manage credit risk and liquidity risk
- c. Seasoning of the portfolio and geographical diversity of the portfolio
- d. Trustee company and its experience

- e. Tenor and Liquidity of the PTC
- 2. Policy relating to originators based on nature of originator, track record, NPAs, losses in earlier securitized debt, etc

The investment team shall invests in Securitized debt that are originated by top rated issuers and instruments with high credit rating and established track record (seasoning) with adequate collateral levels. List of originators and the issuer limit shall be reviewed at the periodic meeting of the Investment Committee.

- 3. Risk mitigation strategies for investments with each kind of originator:

Although the policy restricts investments in only top rated issuers and papers (securitized debt instrument) with high credit rating and established track record (seasoning) with adequate collateral levels, the investment committee shall review the exposure towards Securitized debt at regular intervals and also carry out periodic review of cash flow, collaterals and fundamentals of the originator.

- 4. The level of diversification with respect to the underlying assets, and risk mitigation measures for less diversified investments:

We look at combination of originator as well as the underlying asset class while setting up the limits. For all practical purpose single loan PTC exposure is treated as an exposure on the underlying corporate.

- 5. Minimum retention period of the debt by originator prior to securitization:

The minimum retention period of the debt by originator shall be as per the guidelines issued by RBI/ such other regulators.

- 6. Minimum retention percentage by originator of debts to be securitized:

The originator shall follow the guidelines issued by RBI / such other regulators with respect to the minimum retention percentage by originator of debts to be securitized.

- 7. The mechanism to tackle conflict of interest when the mutual fund invests in securitized debt of an originator and the originator in turn makes investments in that particular scheme of the fund:

Investments in Securitized debt's are considered at par with investments in any other corporate instruments. All necessary disclosures as required under Regulations 25(11) of the SEBI (Mutual Funds) Regulations 1996, shall be followed. There are no other restrictions that the AMC shall follow with respect to the schemes investments in Securitized debt and the originators investments in the same scheme.

- 8. In general, the resources and mechanism of individual risk assessment with the AMC for monitoring investment in securitized debt:

The AMC monitors credits actively through the Investment committee which meets at periodic intervals. The process followed for Securitized debt is in line with our credit mechanism and processes for investing in normal credit exposures subject to additional

criteria as mentioned above. The AMC also interact with external rating agencies for continuous inputs and monitoring of the credit quality of the securitized assets.

PORTFOLIO TURNOVER

The AMC's portfolio management style is conducive to a relatively low portfolio turnover rate. However, the AMC will take advantage of the opportunities that present themselves from time to time because of the conditions prevailing / inefficiencies in the securities markets. The AMC will endeavour to balance the increased cost on account of higher portfolio turnover with the benefits derived therefrom.
