I. INTRODUCTION

RISK FACTORS

Standard Risk Factors:

- Mutual Funds and securities investments are subject to market risks and there is no assurance or guarantee that the objectives of the Scheme will be achieved.
- Investment in Mutual Fund Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal.
- As the price / value / interest rates of the securities in which the scheme invests fluctuates, the value of your investment in the scheme may go up or down depending on the factors and forces affecting the capital markets.
- Past performance of the Sponsor and other affiliates/AMC/Mutual Fund (or any of its schemes) does not guarantee future performance of the scheme.
- IDFC Imperial Equity Fund is the name of the scheme does not in any manner indicate either the quality of the scheme or its future prospects and returns.
- The sponsor is not responsible or liable for any loss resulting from the operation of the scheme beyond the initial contribution of Rs.30,000 made by it towards setting up the Fund.
- The present scheme is not a guaranteed or assured return scheme.

Scheme Specific Risk Factors

- The scheme proposes to invest in equity and equity related instruments. Equity instruments by nature are volatile and prone to price fluctuations on a daily basis due to both micro and macro factors. Trading volumes, settlement periods and transfer procedures may restrict the liquidity of these investments. Different segments of financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances. The inability of the Scheme to make intended securities’ purchases due to settlement problems could cause the Scheme to miss certain investment opportunities.

- **Price-Risk or Interest-Rate Risk**: Fixed income securities such as bonds, debentures and money market instruments run price risk or interest-rate risk. Generally, when interest rates rise, prices of existing fixed income securities fall and when interest rates drop, such prices increase. The extent of fall or rise in the prices is a function of the existing coupon, days to maturity and the increase or decrease in the level of interest rates.

- **Reinvestment Risk**: Investments in fixed income securities may carry reinvestment risk as interest rates prevailing on the interest or maturity due dates may differ from the original coupon of the bond. Consequently, the proceeds may get invested at a lower rate.

- **Credit Risk**: In simple terms this risk means that the issuer of a debenture/bond or a money market instrument may default on interest payment or even in paying back the principal amount on maturity. Even where no default occurs, the price of a security may go down because the credit rating of an issuer goes down. It must, however, be noted that where the Scheme has invested in Government securities, there is no credit risk to that extent.

- **Basis Risk (Interest - rate movement)**: During the life of a floating rate security or a swap, the underlying benchmark index may become less active and may not capture the actual movement
in interest rates or at times the benchmark may cease to exist. These types of events may result in loss of value in the portfolio.

- **Spread Risk**: In a floating rate security the coupon is expressed in terms of a spread or mark up over the benchmark rate. However, depending upon the market conditions, the spreads may move adversely or favourably leading to fluctuation in the NAV.

- **Liquidity Risk**: Due to the evolving nature of the floating rate market, there may be an increased risk of liquidity risk in the portfolio from time to time.

- **Other Risk**: In case of downward movement of interest rates, floating rate debt instruments will give a lower return than fixed rate debt instruments.

- **Risk Factors for derivatives**
  1. Credit Risk: The credit risk is the risk that the counter party will default obligations and is generally negligible, as there is no exchange of principal amounts in a derivative transaction. (especially in case of debt derivatives).
  2. Market risk: Derivatives carry the risk of adverse changes in the market price.
  3. Illiquidity risk: The risk that a derivative cannot be sold or purchased quickly enough at a fair price, due to lack of liquidity in the market.
  4. The risk is to the extent that returns are limited for the investor in case of extreme movement in call rates. (applicable to debt derivatives)
  5. The fund pays the daily compounded rate. In practice however there can be a difference in the actual rate at which money is lent in the call market and the benchmark, which appears and is used. (applicable to debt derivatives)

**Risks in Foreign Securities**

To the extent the assets of the scheme are invested in overseas financial assets, there may be risks associated with currency movements, restrictions on repatriation and transaction procedures in overseas market. Further, the repatriation of capital to India may also be hampered by changes in regulations or political circumstances as well as the application to it of other restrictions on investment. In addition, country risks would include events such as introduction of extraordinary exchange controls, economic deterioration, bi-lateral conflict leading to immobilization of the overseas financial assets and the prevalent tax laws of the respective jurisdiction for execution of trades or otherwise.

The Scheme may also invest in ADRs / GDRs / Other Foreign Securities as permitted by Reserve Bank of India and Securities and Exchange Board of India from time to time. To the extent that some part of the assets of the Schemes may be invested in securities denominated in foreign currencies, Indian Rupee equivalent of the net assets, distributions and income may be adversely affected by the changes in the value of certain foreign currencies relative to the Indian Rupee. The repatriation of capital also may be hampered by changes in regulations concerning exchange controls or political circumstances as well as the application to it of other restrictions on investment as applicable.

As the investment may be made in stocks of different countries, the portfolio shall be exposed to the political, economic and social risks with respect to each country. However, the portfolio manager shall ensure that his exposure to each country is limited so that the portfolio is not exposed to one country. Investments in various economies will also diversify and reduce this risk.

Currency Risk: The schemes may invest in securities denominated in a broad range of currencies and may maintain cash in such currencies. As a consequence, fluctuations in the value of such currencies
against the currency denomination of the relevant scheme will have a corresponding impact on the value of the portfolio. Furthermore, investors should be aware that movements in the rate of exchange between the currency of denomination of a fund and their home currency will affect the value of their shareholding when measured in their home currency.

In respect of the corpus of the Scheme that is invested in overseas mutual fund schemes, investors shall bear the proportionate recurring expenses of such underlying scheme(s), in addition to the recurring expenses of the Scheme. Therefore, the returns attributable to such investments by the Scheme may be impacted or may, at times, be lower than the returns that the investors could obtain by directly investing in the said underlying scheme.

Risk Associated with Securitised Debt

The Scheme may invest in domestic securitized debt such as asset backed securities (ABS) or mortgage backed securities (MBS). Asset Backed Securities (ABS) are securitized debts where the underlying assets are receivables arising from various loans including automobile loans, personal loans, loans against consumer durables, etc. Mortgage backed securities (MBS) are securitized debts where the underlying assets are receivables arising from loans backed by mortgage of residential / commercial properties. ABS/MBS instruments reflect the undivided interest in the underlying pool of assets and do not represent the obligation of the issuer of ABS/MBS or the originator of the underlying receivables. The ABS/MBS holders have a limited recourse to the extent of credit enhancement provided. If the delinquencies and credit losses in the underlying pool exceed the credit enhancement provided, ABS/MBS holders will suffer credit losses. ABS/MBS are also normally exposed to a higher level of reinvestment risk as compared to the normal corporate or sovereign debt.

At present in Indian market, following types of loans are securitised:

Auto Loans (cars / commercial vehicles / two wheelers)
Residential Mortgages or Housing Loans
Consumer Durable Loans
Personal Loans
Corporates Loans

The main risks pertaining to each of the asset classes above are described below:

Auto Loans (cars / commercial vehicles / two wheelers)

The underlying assets (cars etc) are susceptible to depreciation in value whereas the loans are given at high loan to value ratios. Thus, after a few months, the value of asset becomes lower than the loan outstanding. The borrowers, therefore, may sometimes tend to default on loans and allow the vehicle to be repossessed. These loans are also subject to model risk i.e. if a particular automobile model does not become popular, loans given for financing that model have a much higher likelihood of turning bad. In such cases, loss on sale of repossessed vehicles is higher than usual.

Commercial vehicle loans are susceptible to the cyclical in the economy. In a downturn in economy, freight rates drop leading to higher defaults in commercial vehicle loans. Further, the second hand prices of these vehicles also decline in such economic environment.

Housing Loans

Housing loans in India have shown very low default rates historically. However, in recent years, loans have been given at high loan to value ratios and to a much younger borrower classes. The loans have not yet gone through the full economic cycle and have not yet seen a period of declining property prices.
Thus the performance of these housing loans is yet to be tested and it need not conform to the historical experience of low default rates.

**Consumer Durable Loans**

The underlying security for such loans is easily transferable without the bank’s knowledge and hence repossession is difficult. The underlying security for such loans is also susceptible to quick depreciation in value. This gives the borrowers a high incentive to default.

**Personal Loans**

These are unsecured loans. In case of a default, the bank has no security to fall back on.

The lender has no control over how the borrower has used the borrowed money.

Further, all the above categories of loans have the following common risks:

All the above loans are retail, relatively small value loans. There is a possibility that the borrower takes different loans using the same income proof and thus the income is not sufficient to meet the debt service obligations of all these loans.

In India, there is no ready database available regarding past credit record of borrowers. Thus, loans may be given to borrowers with poor credit record. In retail loans, the risks due to frauds are high.

**Corporate Loans**

These are loans given to single or multiple corporates. The receivables from a pool of loans to corporates are assigned to a trust that issues pass through certificates in turn. The credit risk in such PTCs is on the underlying pool of loans to corporates. The credit risk of the underlying loans to the corporates would in turn depend on economic cycles.

**Risk Factors Associated with Stock Lending:**

The risks in lending portfolio securities, as with other extensions of credit, consist of the failure of another party, in this case the approved intermediary, to comply with the terms of agreement entered into between the lender of securities i.e., the Scheme and the approved intermediary. Such failure to comply can result in the possible loss of rights in the collateral put up by the borrower of the securities, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of any corporate benefits accruing to the lender from the securities deposited with the approved intermediary. The Mutual Fund may not be able to sell such lent securities and this can lead to temporary illiquidity. The scheme is the first equity scheme being launched by the AMC. The AMC has no previous experience in managing equity schemes; however it has been managing debt schemes in India for over 5 years.

**B. REQUIREMENT OF MINIMUM INVESTORS IN THE SCHEME**

In each quarter, on an average basis, the scheme(s) shall endeavour to meet with both the conditions i.e. of minimum number of investors (20 investors) and holding as a percentage (25%) of the corpus. The average net assets of the scheme would be calculated daily and any breach of the 25% holding limit by an investor would be determined. At the end of the quarter, the average of daily holding by each such investor is computed to determine whether that investor has breached the 25% limit over the quarter. If there is a breach of limit by any investor over the quarter, a rebalancing period of one month would be allowed and thereafter the investor who is in breach of the rule shall be given 15 days notice to redeem his exposure over the 25 % limit. Failure on the part of the said investor to redeem his exposure over the 25 % limit within the aforesaid 15 days would lead to automatic redemption by the Mutual Fund on the applicable Net Asset Value on the 15th day of the notice period. In the event, the scheme is unable to comply with the afore said conditions, the scheme shall be wound up as per SEBI Regulations.
C. SPECIAL CONSIDERATIONS, if any

All the above factors not only affect the prices of securities but may also affect the time taken by the Fund for redemption of units, which could be significant in the event of receipt of a very large number of redemption requests or very large value of redemption requests. The liquidity of the assets may be affected by other factors such as general market conditions, political events, bank holidays and civil strife. In view of this, the Trustee has the right in its sole discretion to limit redemption (including suspension of redemption) under certain circumstances. Please refer to Section titled “Units on Offer”.

The liquidity of the Scheme’s investments may be restricted by trading volumes, settlement periods and transfer procedures. In the event of an inordinately large number of redemption requests or of a restructuring of the Scheme’s portfolio, the time taken by the Scheme for redemption of Units may become significant. In view of this, the Trustee has the right in its sole discretion to limit redemption (including suspension of redemption) under certain circumstances. Please refer to Section titled “Units on Offer”.

The Scheme may trade in derivatives as permitted under the Regulations subject to guidelines issued by SEBI and RBI from time to time. Trading in Derivatives involves risks, which are explained in Section titled “Investment Objectives and Policies”.

The Scheme may also invest in overseas financial assets as permitted under the applicable regulations. To the extent that the assets of the Scheme will be invested in securities denominated in foreign currencies, the Indian Rupee equivalent of the net assets, distributions and income may be adversely affected by changes in the value of certain foreign currencies relative to the Indian Rupee. The repatriation of capital to India may also be hampered by changes in regulations concerning exchange controls or political circumstances as well as the application to it of other restrictions on investment.

In case the scheme undertakes stock lending under the Regulations, the Scheme may, at times be exposed to counter party risk.

Redemptions due to change in the fundamental attributes of the Scheme or due to any other reasons may entail tax consequences. The Trustee, AMC, Mutual Fund, their directors or their employees shall not be liable for any such tax consequences that may arise.

The tax benefits described in this Scheme Information Document are as available under the present taxation laws and are available subject to conditions. The information given is included for general purpose only and is based on advice received by the AMC regarding the law and practice in force in India and the Unitholders should be aware that the relevant fiscal rules or their interpretation may change. As is the case with any investment, there can be no guarantee that the tax position or the proposed tax position prevailing at the time of an investment in the Scheme will endure indefinitely. In view of the individual nature of tax consequences, each Unitholder is advised to consult his/her own professional tax advisor.

E. INVESTMENT STRATEGIES AND RISK CONTROL

(i) Investment Strategy

The scheme is benchmarked to S&P CNX Nifty. The index constituents are large cap and frontline stocks listed on the NSE. The portfolio of the scheme will accordingly be oriented towards the large cap segment of the Indian stock market.

Equity

The scheme will invest in well-managed growth companies that are available at reasonable value. Companies would be identified through a systematic process of forecasting earnings based on a deep understanding of the industry growth potential and interaction with company management to access the company’s core competencies to achieve long-term sustainable profit growth. The Scheme is expected to deliver superior relative returns for investors looking for a focused aggressive portfolio of fundamentally good businesses. The guiding principles while managing the portfolio are summarized below:

1) Sustainable company profits drives long term share value

Fund management would focus primarily on business fundamentals of the underlying company. The Equity Research process will endeavor to acquire a robust understanding of the dynamics of the underlying business. This would form the basis for forecasts on future profitability and sustainability of cash profit growth. Stock prices of companies that can sustain periods of high cash profit growth will outperform the markets over the long term. Investors entering this scheme are therefore expected to have at least a one year time horizon.

2) Acquire stocks at reasonable value

Once good businesses are identified, stocks would be acquired when they are available at a reasonable value. Overall market corrections and stock price falls due to temporary factors that don’t affect long-term profitability are an excellent opportunity to buy stocks cheap.

3) Monitor market interest to ensure consistent performance

Systematically tracking over stock ownership and over researched sectors would help to reduce the risk of a sudden sell off. Stock prices react to event triggers that are constantly monitored to ensure that portfolio performance is more consistent.

Debt

The domestic debt markets are maturing rapidly with liquidity emerging in various debt segments through the introduction of new instruments and investors. The actual percentage of investment in various fixed income securities will be decided after considering the prevailing political conditions, the economic environment (including interest rates and inflation), the performance of the corporate sector and general liquidity and other considerations in the economy and markets. The Fund has put in place detailed Investment Discretion Guidelines defining the prudential and concentration limits for the portfolio limits. The investment management team is allowed full discretion to make sale and purchase decisions within the limits established. The Fund Manager/(s) record a justification for investments made, on the deal slip.

Investment Management Committee (IMC) in its periodic meetings will track portfolio investment rationale, portfolio composition, performance etc. Any modifications to the Investment Discretion Guidelines can be made by the IMC and will be ratified by the Board. The performance of the fund will be monitored against its peer group in the industry and presented at every Board meeting along with the portfolio of the Schemes. The Board of Directors discusses the performance and portfolio composition of the scheme and queries will be responded to by the Managing Director.
Risk control

All investment decisions, relating to the Scheme, will be undertaken by the AMC in accordance with the Regulations and the investment objectives specified in this Scheme Information Document. All investment decisions taken by the AMC in relation to the Scheme shall be recorded.

The Investment Management Committee (IMC) consisting of senior employees including the Managing Director of the AMC to oversee the Investment function, will be responsible for laying down the broad Investment Policy and the Specific scheme mandates, in addition to monitoring scheme performance and reviewing portfolio strategy. The risk control parameters would be laid down for each scheme based on the objectives of the scheme and prudent fund management practices will ensure that investor monies are invested in the appropriate risk/reward environment. The AMC would ensure that investments are made in accordance with the regulatory / internal guidelines, if any.

The designated Fund manager of the scheme will be responsible for taking the day-to-day investment decisions and will interalia be responsible for security selection, portfolio creation and timing of investment decisions.

The Fund Manager would work with Research team to pick stocks. They will prepare a detailed report on any new company that would be acquired for the Scheme. This report would cover the overall industry environment, discuss demand supply dynamics of the company’s products and make profitability projections. This report would also contain a discussion on the valuation for the stock price. The Fund Manager would document reasons for each transaction.

The Scheme performance would be benchmarked to S&P CNX Nifty. The fund reserves the right to change the said benchmark and/or adopt one/more other benchmarks to compare the performance of the Scheme.

In case of investments in debt instruments, the AMC aims to identify securities, which offer superior levels of yield at lower levels of risks. With the aim of controlling risks, requisite credit evaluation of the securities proposed to be invested in will be carried out by the investment team of the AMC. Rated Debt instruments in which the Scheme invests will be of investment grade as rated by a credit rating agency. The AMC will be guided by the ratings of Rating Agencies such as CRISIL, CARE, ICRA and Duff and Phelps Credit Rating India Limited or any other rating agencies that may be registered with SEBI from time to time. In case a debt instrument is not rated, prior approval of the Board of Directors of Trustee Company and the AMC will be obtained for such an investment.

In addition, the investment team of the AMC will study the macro economic conditions, including the political and economic environment and factors affecting liquidity and interest rates. The AMC will use this analysis to attempt to predict the likely direction of interest rates and position the portfolio appropriately to take advantage of this.

The Scheme may use various derivatives and hedging products from time to time, as would be available and permitted by SEBI, in an attempt to protect the value of the portfolio and enhance Unitholders’ interests.

The Scheme may invest in other Schemes managed by the AMC or in the Schemes of any other Mutual Funds, provided it is in conformity to the investment objectives of the Scheme and in terms of the prevailing Regulations. As per the Regulations, no investment management fees will be charged for such investments and the aggregate inter-Scheme investment made by all Schemes of IDFC Mutual Fund or in the Schemes under the management of other asset management companies shall not exceed 5% of the net asset value of the IDFC Mutual Fund. The limit however does not apply to any Fund of Funds scheme.
For the present, the Scheme does not intend to enter into underwriting obligations. However, if the Scheme does enter into an underwriting agreement, it would do so after complying with the Regulations.

NOTE ON DEBT & MONEY MARKET IN INDIA

The Indian debt markets are one of the largest such markets in Asia. Government and public Sector enterprises are predominant borrowers in the market. While interest rates were regulated till a few years back, there has been a rapid deregulation and currently both the lending and deposit rates are market determined.

The debt markets are developing fast, with the rapid introduction of new instruments including derivatives. Foreign Institutional Investors are also allowed to invest in Indian debt markets now. There has been a considerable increase in the trading volumes in the market with the relatively high trading volumes. The trading volumes are largely concentrated in the Government of India Securities, which contribute a high proportion of the daily trades.

The money markets in India essentially consist of the call money market (i.e. market for overnight and term money between banks and institutions), repo transactions (temporary sale with an agreement to buy back the securities at a future date at a specified price), commercial papers (CPs, short term unsecured promissory notes, generally issued by corporates), certificate of deposits (CDs, issued by banks) and Treasury Bills (issued by RBI). A predominantly institutional market, the key money market players are banks, financial institutions, insurance companies, mutual funds, primary dealers and corporates.

Certain instruments currently available for investments and their current yields are given as under:

The mutual fund or AMC and its empanelled brokers have not given and shall not give any indicative portfolio and indicative yield in any communication, in any manner whatsoever. Investors are advised not to rely on any communication regarding indicative yield/ portfolio with regard to the scheme.

Investments in Securitised Debt Instruments

Investment in such securities will not exceed 35% of the net assets of the Scheme or such other limit as may be decided by the Trustee from time to time. Scheme may invest in domestic securitized debt such as asset backed securities (ABS) or mortgage backed securities (MBS). Asset Backed Securities (ABS) are securitized debts where the underlying assets are receivables arising from automobile loans, personal loans, loans against consumer durables, etc. Mortgage backed securities (MBS) are securitized debts where the underlying assets are receivables arising from loans backed by mortgage of
residential / commercial properties. At present in Indian market, following types of loans are securitised
1) Auto Loans (cars / commercial vehicles /two wheelers) 2) Residential Mortgages or Housing Loans 3)
Consumer Durable Loans & 4) Personal Loans. Investments in securitised debt instruments shall be
made when in view of the Fund Manager, such investments could provide reasonable returns commensurate with risks associated with such investments and shall be made in accordance with the
investment objective of the Scheme. Typically, investments in securitised debt instruments offer better
yield to the investors. The various types of receivables that can be securitised can be receivables from
auto loans, personal loans, loans to corporates etc. The investment would be made in line with the
objective of the fund.

TRADING IN DERIVATIVES

Equity Derivatives as a product was introduced in India only in June 2000. The first derivative product
was Index Futures on the S&P CNX Nifty. European style index options on the NIFTY were first
introduced in June 2001. We have come a long way since then. As of today, Index Options are available
on 3 indices – S&P CNX Nifty, CNX IT, and Bank Nifty. American Style Stock Options were introduced in
July 2001 and are currently available in around 222 stocks.

We were one of the few markets to introduce Single Stock Futures (SSF). Following India’s lead, other
leading exchanges such as EUREX and EURONEXT have introduced SSF’s for trading. All derivative
contracts currently are available for 3 maturities – First month (Near), Second month (Middle) and Third
month (Far Month).

Indian Equity Derivatives - The growing Opportunity: The volume of derivative contracts traded continues
to increase. Average daily futures volumes have increased to Rs 13000 crores. At present the volume in
the Derivative market is 4x that of the cash market.

Increasing International Interest: FII
s hold around 30-35% of the total Futures Open Interest. Arbitrage
funds are very active traders in India with Investments at any given point of time exceeding Rs 6000
crores. Directional fund managers use Index / Stock Futures for trading as well as hedging.

Exposure limits:

1. The scheme shall not write options or purchase instruments with embedded written
   options.
2. The total exposure related to option premium paid shall not exceed 20% of the net assets
   of the scheme.
3. Cash or cash equivalents with residual maturity of less than 91 days may be treated as not
   creating any exposure.
4. Exposure due to hedging positions may not be included in the above mentioned limits
   subject to the following

   a. Hedging positions are the derivative positions that reduce possible losses on an existing
      position in securities and till the existing position remains.
   b. Hedging positions cannot be taken for existing derivative positions. Exposure due to such
      positions shall have to be added and treated under limits mentioned above (The cumulative
      gross exposure through equity, debt and derivative positions should not exceed 100% of the net
      assets of the scheme.)
   c. Any derivative instrument used to hedge has the same underlying security as the existing
      position being hedged.
   d. The quantity of underlying associated with the derivative position taken for hedging purposes
      does not exceed the quantity of the existing position against which hedge has been taken.

5. The scheme may enter into plain vanilla interest rate swaps for hedging purposes. The counter
   party in such transactions shall be an entity recognized as a market maker by RBI. Further, the
value of the notional principal (with respect to interest rate swaps) in such cases shall not exceed the value of respective existing assets being hedged by the scheme. Exposure to a single counterparty in such transactions shall not exceed 10% of the net assets of the scheme.

6. Exposure due to derivative positions taken for hedging purposes in excess of the underlying position against which the hedging position has been taken, shall be treated under the limits mentioned above.

Definition of Exposure in case of Derivative Positions

Each position taken in derivatives shall have an associated exposure as defined under. Exposure is the maximum possible loss that may occur on a position. However, certain derivative positions may theoretically have unlimited possible loss. Exposure in derivative positions shall be computed as follows:

<table>
<thead>
<tr>
<th>Position</th>
<th>Exposure</th>
</tr>
</thead>
<tbody>
<tr>
<td>Long Future</td>
<td>Futures Price * Lot Size * Number of Contracts</td>
</tr>
<tr>
<td>Short Future</td>
<td>Futures Price * Lot Size * Number of Contracts</td>
</tr>
<tr>
<td>Option bought</td>
<td>Option Premium Paid * Lot Size * Number of Contracts</td>
</tr>
</tbody>
</table>

All derivative position taken in the portfolio would be guided by the following principles.

i. Position limit for the Mutual Fund in index options contracts

a. The Mutual Fund position limit in all index options contracts on a particular underlying index shall be Rs. 500 crore or 15% of the total open interest of the market in index options, whichever is higher, per Stock Exchange.

b. This limit would be applicable on open positions in all options contracts on a particular underlying index.

ii. Position limit for the Mutual Fund in index futures contracts:

a. The Mutual Fund position limit in all index futures contracts on a particular underlying index shall be Rs. 500 crore or 15% of the total open interest of the market in index futures, whichever is higher, per Stock Exchange.

b. This limit would be applicable on open positions in all futures contracts on a particular underlying index.

iii. Additional position limit for hedging

In addition to the position limits at point (i) and (ii) above, the Mutual Fund may take exposure in equity index derivatives subject to the following limits:

1. Short positions in index derivatives (short futures, short calls and long puts) shall not exceed (in notional value) the Mutual Fund's holding of stocks.
2. Long positions in index derivatives (long futures, long calls and short puts) shall not exceed (in notional value) the Mutual Fund’s holding of cash, government securities, T-Bills and similar instruments.

iv. Position limit for Mutual Fund for stock based derivative contracts

The Mutual Fund position limit in a derivative contract on a particular underlying stock, i.e. stock option contracts and stock futures contracts, is defined in the following manner:-

1. For stocks having applicable market-wise position limit (MWPL) of Rs. 500 crores or more, the combined futures and options position limit shall be 20% of applicable MWPL or Rs. 300 crores, whichever is lower and within which stock futures position cannot exceed 10% of applicable MWPL or Rs. 150 crores, whichever is lower.

2. For stocks having applicable market-wise position limit (MWPL) less than Rs. 500 crores, the combined futures and options position limit would be 20% of applicable MWPL and futures position cannot exceed 20% of applicable MWPL or Rs. 50 crore whichever is lower.

v. Position limit for each scheme of a Mutual Fund for stock based derivative contracts

The scheme-wise position limit / disclosure requirements shall be –

1. For stock option and stock futures contracts, the gross open position across all derivative contracts on a particular underlying stock of a scheme of a mutual fund shall not exceed the higher of:

1% of the free float market capitalisation (in terms of number of shares) or 5% of the open interest in the derivative contracts on a particular underlying stock (in terms of number of contracts).

2. This position limits shall be applicable on the combined position in all derivative contracts on an underlying stock at a Stock Exchange.

3. For index based contracts, Mutual Funds shall disclose the total open interest held by its scheme or all schemes put together in a particular underlying index, if such open interest equals to or exceeds 15% of the open interest of all derivative contracts on that underlying index.

Illustrations

Index Futures
Index Futures have been introduced by BSE and NSE. Generally three futures of 1 month 2 months and 3 months are presently traded on these exchanges. These futures expire on the last working Thursday of the respective months.

If the Nifty (Index) was 1875 at the beginning of a month and the quotes for the three futures were as under:

<table>
<thead>
<tr>

<tr>

</table>

The Fund can buy an Index of month 1 on the last day of the month prior to month 1 in the illustration above at an offer price of 1885.

In this example, the Index Future trade has resulted in profitability compared to actual purchase of the underlying index stocks. The profitability of Index Future as compared to an individual security will interalia depend upon the carrying cost, the interest available on surplus funds and the transaction cost.

There are futures based on stock indices as mentioned above as also futures based on individual stocks.

**Illustrative list of strategies that can employ futures**

**Strategies that employ index futures and their objectives:**

(a) The fund has an existing equity portion invested in a basket of stocks. In case the fund manager has a view that the equity markets are headed downwards, the fund can then hedge the exposure to equity either fully or partially by initiating short futures positions in the index. A similar position in the long direction can also be initiated by the fund to hedge its position of cash and permissible equivalents. The extent to which this can be done is determined by existing guidelines.

(b) To the extent permissible by extant regulations the scheme can initiate a naked short position in an underlying index future traded on a recognized stock exchange. In case the nifty near month future contract trading at say, 1850, and the fund manager has a view that it will depreciate going forward, the fund can initiate a sale transaction of nifty futures at 1850 without holding a portfolio of...
equity stocks or any other underlying long equity position. Once the price falls to 1800 after say, 20 days the fund can initiate a square-up transaction by buying the said futures and book a profit of 50. Correspondingly the fund can take a long position without an underlying cash/ cash equivalent subject to the extant regulations.

Risk associated with this strategy:
1. Lack of opportunities available in the market
2. Inability of the derivatives to correlate perfectly with underlying indices
3. Execution risk, whereby the rates seen on the screen may not be the rates at which the ultimate execution takes place.

Strategies that employ Stock specific Futures and their objectives:
Individual stock futures are also available in the Indian Equity Markets. Stock futures trade either at a premium or at discount to the spot prices, the level of premium generally reflects the cost of carry. Stock specific issues may have a bearing on futures as speculators may find futures as a cost-effective way of executing their view on the stock. However such executions usually increase the premium/discount to the spot significantly, thereby giving rise to arbitrage opportunities for a fund.

(a) Selling spot and buying future : In case the fund holds the stock of a company at say Rs. 1000 while in the futures market it trades at a discount to the spot price say at Rs. 980 then the fund may sell the stock and buy the futures. On the date of expiry of the stock future, the fund may reverse the transactions (i.e. Buying at Spot & Selling futures) and earn a risk-free Rs. 20/- (2% absolute) on its holdings. As this can be without any dilution of the view of the fund on the underlying stock the fund can still benefit from any movement of the price in the northward direction, i.e. if on the date of expiry of the futures, if the stock trades at 1100 which would be the price of the futures too, the fund will have a benefit of Rs. 100/- whereby the fund gets the 10% upside movement together with the 2% benefit on the arbitrage, and thus getting a total return of 12%

(b) Buying spot and selling future :Where the fund holds the stock of a company trading in the spot market at Rs 1000 while it trades at Rs. 1020/- in the futures market then fund may buy the stock at spot and sell in the futures market thereby earning Rs 20. In case of adequacy of cash with the fund, this strategy may be used to enhance returns of the Scheme which was otherwise sitting on cash.

(c) Buying stock future: Where the scheme wants to initiate a long positon in a stock whose spot price is at say, Rs.1000 and futures is at 980, then the fund may just buy the futures contract instead of the spot thereby benefiting from a lower cost option.

(d) In case the fund has a bearish view on a stock which is trading in the spot market at Rs.1000/- and the futures market at say Rs.980/- The fund can express such a view subject to extant SEBI regulations by initiating a short position in the futures contract. In case the view is right and the futures price depreciates to say 900/- the fund can square up the short position thereby earning a profit of Rs. 80/-

Risk associated with this strategy:
- Lack of opportunities available in the market
- Inability of the derivatives to correlate perfectly with underlying security
- Execution risk, whereby the rates seen on the screen may not be the rates at which the ultimate execution takes place.

Strategies that use Options and the objectives of such strategies:
Option contracts are of two types - Call and Put; the former being the right, but not obligation, to purchase a prescribed number of shares at a specified price before or on a specific expiration
date and the latter being the right, but not obligation, to sell a prescribed number of shares at a specified price before or on a specific expiration date. The price at which the shares are contracted to be purchased or sold is called the strike price. Options that can be exercised on or before the expiration date are called American Options, while those that can be exercised only on the expiration date are called European Options. Option contracts are designated by the type of option, name of the underlying, expiry month and the strike price. Thus options can be used to earn less volatile returns, earn the premium or use for hedging purposes etc.

**Illustrations of use of Options**

Call Option (Buy): The fund buys a call option at the strike price of say Rs.1000 and pays a premium of say Rs. 50, the fund would earn profits if the market price of the stock at the time of expiry of the option is more than 1050 being the total of the strike price and the premium thereon. If on the date of expiry of the option the stock price is below Rs 1000, the fund will not exercise the option while it loses the premium of Rs 50.

Put Option (Buy): The fund buys a Put Option at Rs 1000 by paying a premium of say Rs 50. If the stock price goes down to Rs. 900, the fund would protect its downside and would only have to bear the premium of Rs 50 instead of a loss of Rs 100 whereas if the stock price moves up to say Rs. 1100 the fund may let the Option expire and forego the premium thereby capturing Rs. 100 upside after bearing the premium of Rs50.

The above option positions can be initiated in both index based options as well as stock specific options.

Risk associated with this strategy:

- Lack of opportunities available in the market
- Inability of the derivatives to correlate perfectly with underlying security
- Execution risk, whereby the rates seen on the screen may not be the rates at which the ultimate execution takes place.

The AMC retains the right to enter into such derivative transactions as may be permitted by the applicable regulations from time to time.

**Debt Derivatives**

In terms of Circular No. MFD.BC.191/07.01.279/1999-2000 and MPD.BC.187/07.01.279/1999-2000 dated November 1, 1999 and July 7, 1999 respectively issued by Reserve Bank of India permitting participation by Mutual Funds in Interest Rate Swaps and Forward Rate Agreements, the Fund will use derivative instruments for the purpose of hedging and portfolio balancing. The AMC would undertake the same for similar purposes only.

*Interest Rate Swaps (IRS)*

An IRS is an agreement between two parties to exchange stated interest obligations for an agreed period in respect of a notional principal amount. The most common form is a fixed to floating rate swap where one party receives a fixed (pre-determined) rate of interest while the other receives a floating (variable) rate of interest.

*Forward Rate Agreement (FRA)*

A FRA is basically a forward starting IRS. It is an agreement between two parties to pay or receive the difference between an agreed fixed rate (the FRA rate) and the interest rate (reference rate) prevailing on a stipulated future date, based on a notional principal amount for an agreed period. The only cash flow is the difference between the FRA rate and the reference rate. As is the case with IRS, the notional amounts are not exchanged in FRAs.
EXAMPLE OF A DERIVATIVES TRANSACTION

Basic Structure Of A Swap
Bank A has a 6 month Rs 10 crore liability, currently being deployed in call. Bank B has a Rs 10 crore 6 month asset, being funded through call. Both banks are running an interest rate risk. To hedge this interest rate risk, they can enter into a 6 month MIBOR (Mumbai Inter Bank Offered Rate) swap. Through this swap, A will receive a fixed preagreed rate (say 7%) and pay “call” on the NSE MIBOR (“the benchmark rate”). Bank A’s paying at “call” on the benchmark rate will neutralise the interest rate risk of lending in call. B will pay 7% and receive interest at the benchmark rate. Bank A’s receiving of “call” on the benchmark rate will neutralise his interest rate risk arising from his call borrowing.

The mechanism is as follows:

Assume the swap is for Rs.10 crore from March 1, 2002 to September 1, 2002. A is a fixed rate receiver at 7% and B is a floating rate receiver at the overnight compounded rate.

On March 1, 2002 A and B will exchange only an agreement of having entered this swap. This documentation would be as per International Swaps and Derivatives Association (ISDA).

On a daily basis, the benchmark rate fixed by NSE will be tracked by them. On September 1, 2002 they will calculate the following:

A is entitled to receive interest on Rs.10 crore at 7% for 184 days i.e. Rs. 35.28 lakh, (this amount is known at the time the swap was concluded) and will pay the compounded benchmark rate.

B is entitled to receive daily compounded call rate for 184 days & pay 7% fixed.

On September 1, 2002, if the total interest on the daily overnight compounded benchmark rate is higher than Rs. 35.28 lakhs, A will pay B the difference. If the daily compounded benchmark rate is lower, then B will pay A the difference.

Effectively Bank A earns interest at the rate of 7% p.a. for six months without lending money for 6 months fixed, while Bank B pays interest @ 7% p.a. for 6 months on Rs. 10 crore, without borrowing for 6 months fixed.

The AMC retains the right to enter into such derivative transactions as may be permitted by the applicable regulations from time to time.

INVESTMENTS IN OVERSEAS ASSET/ FOREIGN SECURITIES

In line with the investment objective and in accordance with guidelines issued by SEBI vide circular No SEBI/IMD/CIR NO. 7/104753/2007 dated September 26, 2007, the scheme may invest in the foreign/overseas securities and such other securities as may be permitted by SEBI/RBI from time to time.

The fund may also appoint overseas investment advisors / managers to advise / manage portfolio of foreign securities.

The investment in such Overseas Financial Assets shall not exceed the limit as may be imposed by SEBI/ RBI from time to time.

AMC believes that overseas securities offer new investment and portfolio diversification opportunities into multi-market and multicurrency products. However, such investments also entail additional risks.

The Fund may, where necessary, appoint other intermediaries of repute as advisors, sub-managers, or sub custodians for managing and administering such investments. The appointment of such intermediaries shall be in accordance with the applicable requirements, if any, of SEBI.

To manage risk associated with foreign currency and interest rate exposure and for efficient portfolio management, the fund may use derivatives such as cross currency swaps etc. The use of derivatives would be in accordance with the prevailing regulations.

**DEBT MARKETS ABROAD:**

Overseas debt markets are deep and vibrant and much more sophisticated than the Indian debt markets. Most individual bonds are bought and sold in the over-the-counter (OTC) market, although some corporate bonds are also listed on the New York Stock Exchange. The OTC market comprises hundreds of securities firms and banks that trade bonds by phone or electronically. Some are dealers that keep an inventory of bonds and buy and sell these bonds for their own account; others act as agent and buy from or sell to other dealers in response to specific requests on behalf of customers. Quotes are available for an entire gamut of securities of varying maturities. Among the types of bonds one can choose from are: Government securities, municipal bonds, corporate bonds, mortgage and asset-backed securities, federal agency securities and foreign government bonds. Bond choices range from the highest credit quality Treasury securities, which are backed by the full faith and credit of the government, to bonds that are below investment-grade and considered speculative. Since a bond may not be redeemed, or reach maturity, for years - even decades, credit quality becomes an important consideration when you are evaluating a fixed/floating income investment.

In the United States, major rating agencies include Moody’s Investors Service, Standard & Poor’s Corporation and Fitch. Each of the agencies assigns its ratings based on in-depth analysis of the issuer’s financial condition and management, economic and debt characteristics and the specific revenue sources securing the bond. The highest ratings are AAA (S&P and Fitch) and Aaa (Moody’s).
Bonds rated in the BBB category or higher are considered investment grade; securities with ratings in the BB category and below are considered “high yield” or below investment grade.

While experience has shown that a diversified portfolio of high yield bonds will, over the long run, have only a modest risk of default, it is extremely important to understand that, for any single bond, the high interest rate that generally accompanies a lower rating is a signal or warning of higher risk.

The Link between Interest Rates and Maturity

Changes in interest rates do not affect all bonds equally. The longer it takes for a bond to mature, the greater the risk that prices will fluctuate along the way and that the fluctuations will be greater and the more the investors will expect to be compensated for taking the extra risk. There is a direct link between maturity and yield. It can best be seen by drawing a line between the yields available on like securities of different maturities, from shortest to longest. Such a line is called a yield curve. A yield curve could be drawn for any bond market but it is most commonly drawn for the Treasury market, which offers securities of every maturity and where all issues bear the same top credit quality. By watching the yield curve, as reported in the daily financial press, you can gain a sense of where the market perceives interest rates to be headed one of the important factors that could affect your bonds’ prices. A normal yield curve would show a fairly steep rise in yields between short and intermediate term issues and a less pronounced rise between intermediate and long term issues. That is as it should be, since the longer the investor’s money is at risk, the more the investor should expect to earn.

Procedure & Recording of Investment Decisions and Risk Control

All investment decisions, relating to the Scheme, will be undertaken by the AMC in accordance with the Regulations and the investment objectives specified in this Scheme Information Document. All investment decisions taken by the AMC in relation to the Scheme shall be recorded.

The Investment Management Committee (IMC) consisting of senior employees including the Managing Director of the AMC to oversee the Investment function, will be responsible for laying down the broad Investment Policy and the Specific scheme mandates, in addition to monitoring scheme performance and reviewing portfolio strategy. The risk control parameters would be laid down for each scheme based on the objectives of the scheme and prudent fund management practices will ensure that investor monies are invested in the appropriate risk/reward environment. The AMC would ensure that investments are made in accordance with the regulatory / internal guidelines, if any. Internal guidelines may be set by the AMC from time to time and reviewed in line with the market dynamics.

The designated Fund manager of the scheme will be responsible for taking the day-to-day investment decisions and will inter-alia be responsible for asset allocation, security selection and timing of investment decisions.

The Scheme performance would be benchmarked to the S&P CNX Nifty Index. The fund reserves the right to change the said benchmark and/or adopt one/more other benchmarks to compare the performance of the Scheme.

In case of investments in debt instruments, the AMC aims to identify securities, which offer superior levels of yield at lower levels of risks. With the aim of controlling risks, the investment team of the AMC will carry out requisite credit evaluation of the securities. Rated Debt instruments in which the Scheme invests will be of investment grade as rated by a credit rating agency. The AMC will be guided by the ratings of Rating Agencies such as CRISIL, CARE, ICRA and Fitch or any other rating agencies that may be registered with SEBI from time to time. In case a debt instrument is not rated, prior approval of the Board of Directors of Trustee and the AMC will be obtained for such an investment.

The AMC may approach rating agencies such as CRISIL, ICRA, etc for ratings of the scheme. The Scheme may use various derivatives and hedging products from time to time, as would be available and permitted by SEBI, in an attempt to protect the value of the portfolio and enhance Unit holders’ interests.
The Scheme may invest in other Schemes managed by the AMC or in the Schemes of any other Mutual Funds, provided it is in conformity to the investment objectives of the Scheme and in terms of the prevailing Regulations. As per the Regulations, no investment management fees will be charged for such investments and the aggregate inter-Scheme investment made by all Schemes of IDFC Mutual Fund or in the Schemes under the management of other asset management companies shall not exceed 5% of the net asset value of the IDFC Mutual Fund. The limit however does not apply to any Fund of Funds scheme. For the present, the Scheme does not intend to enter into underwriting obligations. However, if the Scheme does enter into an underwriting agreement, it would do so after complying with the Regulations.

**Portfolio Turnover**

Portfolio turnover in the scheme will be a function of market opportunities. It is difficult to estimate with any reasonable measure of accuracy, the likely turnover in the portfolio. The AMC will endeavor to optimize portfolio turnover to optimize risk adjusted return keeping in mind the cost associated with it. A high portfolio turnover rate is not necessarily a drag on portfolio performance and may be representative of investment opportunities that exist in the market.

NFO opened on: 30th January, 2006

NFO closed on: 21st February, 2006

During the Continuous Offer of the Scheme, the units will be available at the NAV.
FACE VALUE OF UNITS

The face value of each unit issued under the scheme shall be Rs. 10/- (Rupees ten).

Minimum Amount for Application

The minimum application amount per option is Rs. 5000/- and in multiple of Re. 1/- thereafter. There would be no maximum limit.

Options offered

Under the scheme, investors may choose either the Growth Option or the Dividend Option.

Growth Option

The Schemes will generally not declare any dividend under this option. The income attributable to Units under this Option will continue to remain invested in the Scheme and will be reflected in the Net Asset Value of Units under this option. This option is suitable for investors who are not looking for dividend, but who have invested with the intention of capital appreciation. If the Units under this option are held as a capital asset for a period of at least one year, from the date of acquisition, Unitholders should get the benefit of long term capital gains tax.

If no indication is given by the investor in the Scheme, the default options that will become applicable are as under:

Dividend Option

Under this option, the Fund will endeavour to declare dividends from time to time.

This option is suitable for investors seeking income through dividend declared by the scheme. The distribution of dividend will be made out of the net surplus under this Option subject to availability of distributable profits, as computed in accordance with SEBI Regulations. The remaining net surplus after considering the dividend and tax, if any, payable thereon will remain invested in the Scheme and be reflected in the NAV. Dividends, if declared, to those Unitholders whose names appear in the Register of Unitholders on the record date. There is no assurance or guarantee to Unitholders as to the rate of dividend distribution nor that dividends will be paid, though it is the intention of the Mutual Fund to make dividend distributions under the Dividend Option of the Scheme. In order to be a Unitholder, an investor has to be allocated Units against clear funds. The exact record date will be communicated to the Registrar. Dividends declared under the Reinvestment Option will be compulsorily reinvested at a price based on the prevailing Ex-Dividend Net Asset Value per Unit.

Any such reinvestment will result in the Unit holder being credited with additional Units representing the value of dividend reinvested at the ex-dividend NAV. The dividend so reinvested shall be constructive payment of dividend to the Unitholders and constructive receipt of the same amount from each Unitholder for reinvestment in Units.

However, it must be distinctly understood that the actual declaration of dividend and the frequency thereof will inter-alia, depend on the availability of distributable profits as computed in accordance with SEBI Regulations. The decision of the Trustee/AMC in this regard shall be final. The AMC reserves the right to change the record date and the AMC also reserves the right to change the frequency of dividends.
Investors should indicate the Option for which the subscription is made by indicating the choice in the appropriate box provided for this purpose in the application form. In case of valid applications received, without indicating any choice of Option, it will be considered for the Growth Option and processed accordingly. Investors may also opt to invest in both the Options of the Scheme subject to minimum subscription requirements under each Option.

The Fund reserves the right to introduce new investment option/s at a later date.

The NAV of the Unit holders in the Dividend Option will stand reduced by the amount of dividend declared on the Record Date. The NAV of the Growth Option will remain unaffected.

As per the Regulations, the Fund shall despatch the dividend warrants within 30 days of declaration of Dividend. However, the Mutual Fund will endeavour to make dividend payments sooner to Unitholders.

There is no assurance or guarantee to Unitholders as to the rate of dividend distribution nor that dividends will be paid, though it is the intention of the Mutual Fund to make dividend distributions under the respective options of the Scheme.

For details on taxation of dividend, please refer to the paragraph titled “Taxation”. The investors should note that the NAVs of the Dividend Option and the Growth Option will be different after the declaration of dividend under the Scheme.

**Dividend Reinvestment facility:**

Investors opting for the Dividend Option may choose to re-invest the dividend to be received by them in additional Units of the Scheme. Under this provision, the dividend due and payable to the Unitholders will compulsorily and without any further act by the Unitholders, be re-invested in the same option (at the first ex-dividend NAV). The dividends so re-invested shall constitute a constructive payment of dividends to the Unitholders and a constructive receipt of the same amount from each Unitholder for re-investment in Units.

On re-investment of dividends, the number of Units to the credit of the Unitholder will increase to the extent of the dividend re-invested divided by the NAV applicable as explained above. There shall, however, be no entry load on the dividends so re-invested

**Dividend less than Rupees 50 to be compulsorily reinvested:**

Where the amount of dividend payable is less than Rs. 50 in the Schemes (s) of IDFC Mutual Fund, the same shall be compulsorily reinvested in the respective Scheme(s) / Plan(s) / Option(s) / Suboption(s) at applicable ex-dividend NAV.

**Dividend Policy**

Dividend declaration and distribution shall be in accordance with SEBI Regulations as applicable from time to time. The AMC reserves the right to declared dividend from time to time, depending on availability of distributable surplus.

**Dividend sweep option:**

Currently, all the schemes of IDFC Mutual Fund have three options i.e Growth and Dividend. Under the Dividend option the investor has the option of Dividend payout and Dividend Re-investment. The Board of Directors / Trustees of the company has approved introduction of 3rd option i.e Dividend Sweep option from Equity schemes into Debt schemes of IDFC Mutual Fund w.e.f March 17, 2011.

Under this option, the investors can instruct the AMC to transfer the amount of dividend declared under the equity scheme to desired Debt schemes of IDFC Mutual Fund.
If the amount of dividend is less than Rs 1/- the dividend shall be re-invested in the same scheme and not transferred to the desired Debt schemes. The transfer shall be effected at the applicable NAV of the next business day.

**Allotment**

Full allotment will be made to all valid applications received during the New Fund Offer Period of respective Plan(s). Allotment of Units, shall be completed not later than five business days after the close of the New Fund Offer Period

(i) If the investors are allotted units at a price higher than Net Asset Value or are given a price lower than Net Asset Value at the time of sale of their units, they shall be paid the difference in amount by the scheme.

(ii) If the investors are charged lower Net Asset Value at the time of purchase of their units or are given higher Net Asset Value at the time of sale of their units, Asset Management Company shall pay the difference in amount to the scheme. The asset management company may recover the difference from the investors.
